APPLICATION NOTE

Recommended circuit

All the WRA_ZMD-15W&WRB_ZMD-15W Series have been tested according to the following recommended testing circuit before leaving factory. This series should be tested under load.

Never be tested under no load (see Figure 1).

(Figure 1)

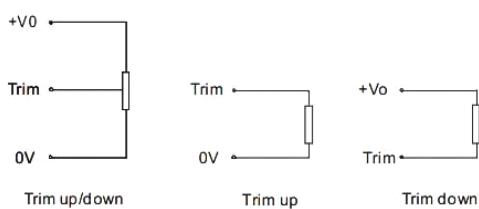

If you want to further decrease the output ripple, you can increase capacitance properly or choose capacitors with low ESR. However, the capacitance can't exceed the maximum capacitor load in the list.

Recommended capacitance

To ensure these series can operate efficiently and reliably, the recommended capacitance of input and output sees the below table.

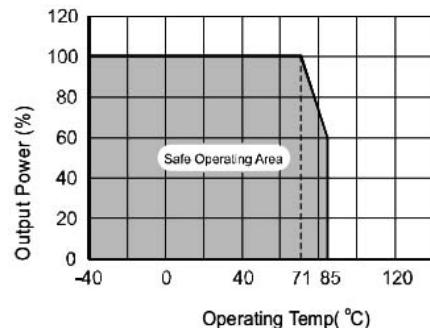

| Output Voltage | Capacitance | Cout | Cin (12V,24V,48V Input) |
|----------------|-------------|--------|----------------------------|
| Single | 3.3V,5V | 220uF | 100uF |
| | 12V,15V | 100uF | |
| Dual | ±5V | ±220uF | 100uF |
| | ±12V,±15V | ±100uF | |
